We Are Participating at OEM Lighting & Display 2016

OEM Lighting & Display 2016 is an innovative new conference focused on the latest advancements in lighting and display technology.   OEM design engineers today are looking for lighting ideas, components and design tools applicable to their specialized needs as product developers. This event, taking place August 3-4, 2016 in Denver, Colo., provides a unique forum for business and technical exchange suited to the needs of OEM design engineers who integrate lighting and display systems into their products — and for lighting industry vendors who cater to the OEM market. Through a combination of educational sessions, exhibits and networking this event will enable all stakeholders participating to benefit.

The event will consist of two full days of educational sessions, a pre-conference day of master classes and intensive workshops, along with an exhibition focused on solutions in: Energy Efficient Design; Drivers; Light Sources; Thermal Management; ICs, Embedded Electronics, Controllers; Displays; and Certification & Testing.

For more information about our company, please visit the conference's sponsors and exhibitor webpage and click on our logo.

"With the help of our technology leaders, OEM Lighting & Display 2016 is turning out to be a fantastic event for the OEM lighting market," said Heather Williams, program manager and editor of LED Journal. "Our attendees and exhibitors alike are excited about the possibilities these events will offer, which include great networking opportunities and the change to build lasting business relationships with numerous contacts in multiple markets."
